

dvdnd

Private equity, made accessible.

Established manufacturers raise growth capital from verified investors worldwide, and pay them back from real profit. On Stellar.

Good businesses can't get the capital to grow.

40%

of businesses globally can't access the growth capital they need

65M

firms in developing economies are capital-constrained

$5.2T

unmet financing need, every year

A profitable parts maker that wants a new line chooses between bank debt and giving up control. Selling a share of future profit to outside investors is reserved for the few with access to private markets.

Source: IFC, MSME Finance Gap (2017)

Capital is moving private. Most investors can't follow.

$2.1T

private equity investment in 2025, as venture LP commitments hit a ten-year low

6% vs 16%

PE distribution yield in 2025 against the 2015–2019 average: investors want cash back

~3,700

US-listed companies, down from 8,000+ in 1996

The best opportunities are abroad, unlisted, and expensive to find, check and buy into.

Sources: KPMG Pulse of Private Equity Q4'25 · PitchBook-NVCA Venture Monitor Q4 2025 · McKinsey Global Private Markets Report 2026 · CRSP via Doidge, Karolyi & Stulz

Launchpads tokenized speculation, not businesses.

0.63%

of pump.fun tokens graduated in September 2025 (1.89% lifetime)

~60%

of active wallets lost money over six months

14.7×

price gap between the first and last buyer on a bonding curve

No cash flow behind the token, so returns come from later buyers. dvdnd keeps the rails and replaces the meme with a business: one price for everyone, and a payout funded by profit.

Sources: arXiv 2602.14860 (pump.fun, Sep 2025) · Dune via Solana Compass, CoinMarketCap · dvdnd research notes, Oct 2026

A share of real profit, as a token only verified investors can hold.

FIXED PRICE · ALL OR NOTHING

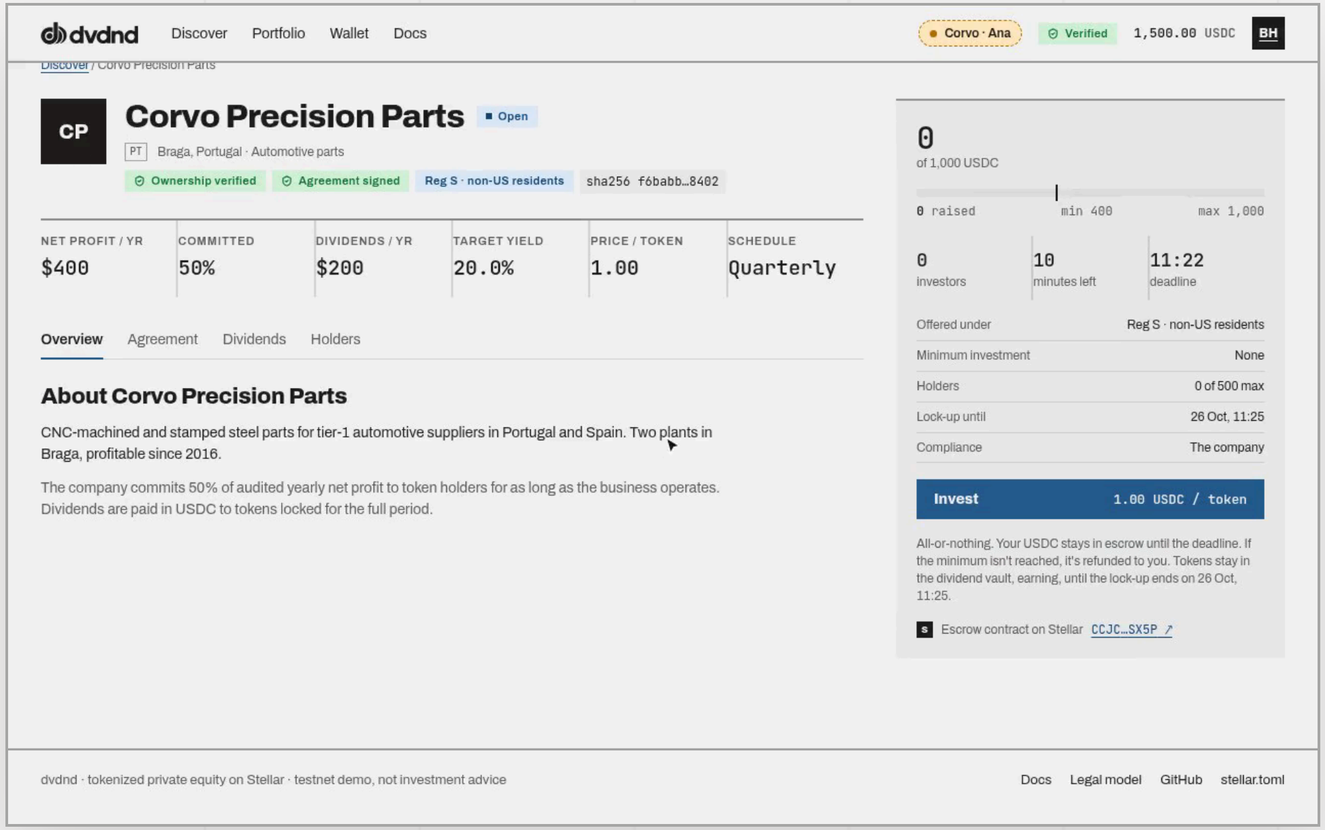

Same price for every investor. Minimum missed: everyone is refunded, by code.

ELIGIBLE BY PROOF · ANONYMOUS BY DESIGN

One identity check, then a zero-knowledge proof. Stellar learns eligibility, not identity.

PAID FROM PROFIT · IN USDC

The company commits a share of yearly profit. Holders who stay locked are paid pro rata.

A LIVE RAISE ON STELLAR TESTNET: CORVO PRECISION PARTS, AUTOMOTIVE PARTS, BRAGA

From raise to dividend, on-chain.

01 · LIST

Prove it's yours

Register lookup fills the profile. DNS proof of domain. Profit-share agreement hashed on-chain.

02 · RAISE

One price

Min, max, deadline. Reg S, Rule 506(c) or both. Flat listing fee.

03 · PROVE

Eligible, privately

Didit identity check, then a Groth16 proof of non-US residence verified by Soroban.

04 · CLOSE

Paid or refunded

USDC in escrow goes to the company or back to investors. No other path.

05 · EARN

Paid to the patient

Tokens earn in the vault. Only full-period lockers share the dividend.

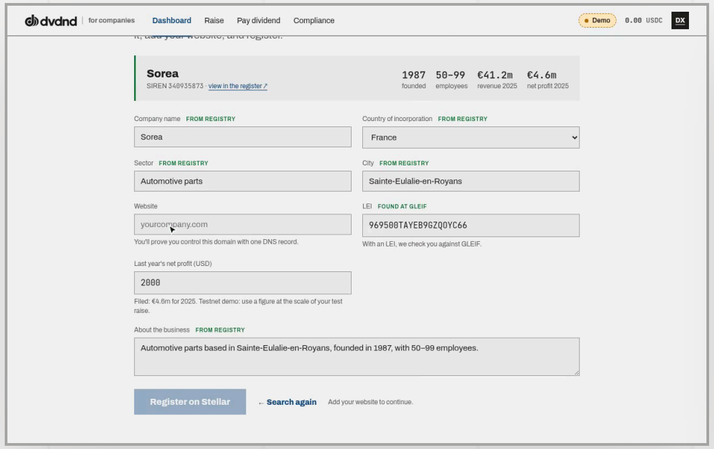

06 · TRADE

Among the eligible

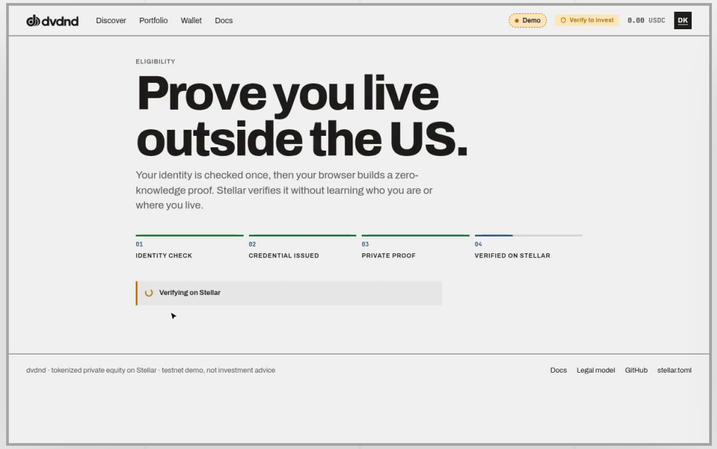

After lock-up, Stellar's order book, restricted to authorized wallets.

Money reaches the company once, at the raise, and flows back to holders as dividends. No bonding curve, no sniper advantage, no buyback.

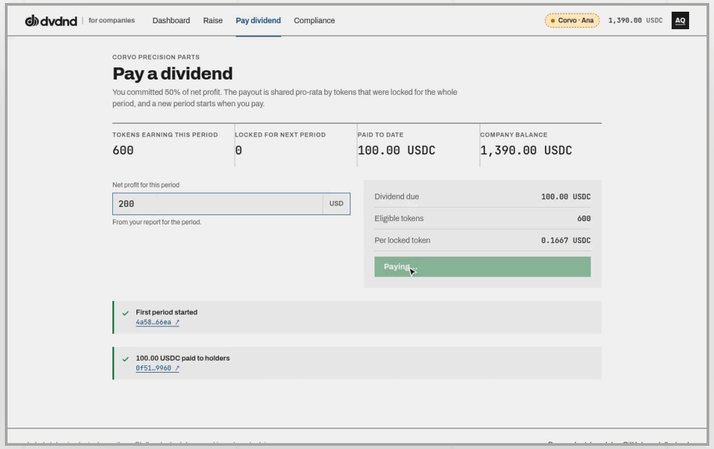

06 THE PRODUCT, LIVE ON TESTNET

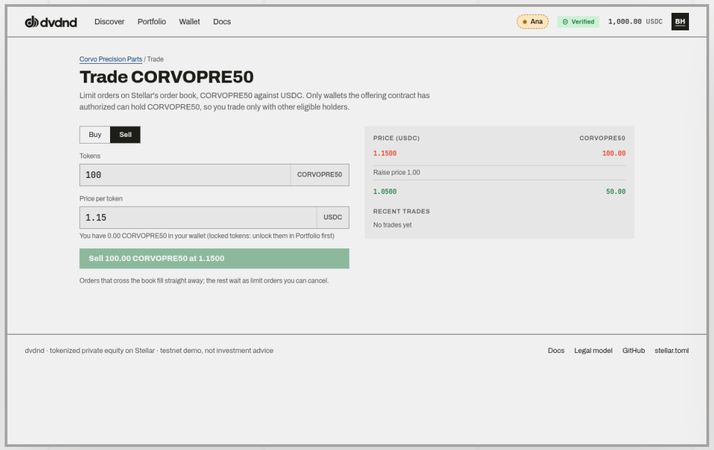

FIND YOURSELF: FRANCE'S REGISTER AND GLEIF FILL THE PROFILE

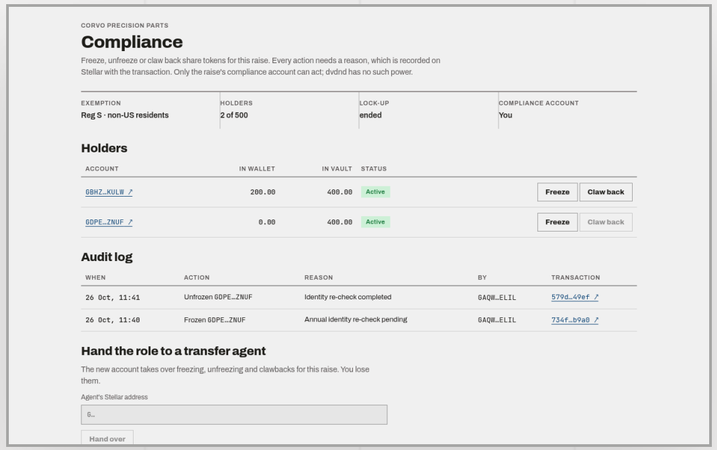

ZK PROOF BUILT IN THE BROWSER, VERIFIED ON STELLAR

THE COMPANY PAYS 50% OF PROFIT TO LOCKED HOLDERS

ORDER BOOK, OPEN ONLY TO ELIGIBLE HOLDERS

PER-RAISE FREEZE AND CLAWBACK, EACH WITH A REASON

Every flow runs for real: wallets, KYC, proofs, escrow, dividends, trades.

Watch the 1:47 film at dvdnd.app/docs

No cut. No custody. No gatekeeper.

RULE	HOW DVDND ENFORCES IT
Securities Act §4(b)	A flat listing fee per raise. Never a share of capital raised: software, not a broker.
Customer funds	Escrowed USDC can only go to the company on success or back to investors. There's no withdraw button.
Regulation S	Non-US residence proven with a zero-knowledge proof, checked by the contract.
Rule 506(c)	Verified accredited investors, US included: an attestation, or $200k minimum ($1M for entities).
Rule 144 · §12(g)	One-year Reg D lock-up and a holder cap under 2,000, both enforced on-chain.
Who may hold	Stellar's `AUTH_REQUIRED` flags refuse transfers to unverified wallets, on every venue.

SEC Release 33-11412, with the CFTC (17 March 2026): a tokenized security is still a security, so on-chain shares use the same proven exemptions as any private raise. Draft strategy, not legal advice.

The protocol enforces the rules, not our servers.

STELLAR FEATURE	USED FOR
BN254 host functions	Groth16 residence proof verified on-chain, ~30M CPU instructions
Poseidon host function	Credential Merkle tree kept on-chain; wallet bound into the proof
Asset auth flags	Only authorized wallets can hold the share token, anywhere
Stellar Asset Contract	Escrow is the token admin: mints exactly what sold, never again
SDEX + path payments	Pay in XLM, receive USDC; secondary order book

5 SOROBAN CONTRACTS

`registry · gate · offering · vault · timelock`

GOVERNANCE

2-of-3 council multisig, master key disabled, every admin change behind a timelock. No power over holders.

PRIVACY

The KYC session is deleted once the proof is on-chain. One wallet per credential.

Not a mock-up. Running on Stellar today.

34/48

components of the plan built for real on testnet

5

Soroban contracts deployed, with every transaction of a full cycle on record

6+1

national business registers plus GLEIF for company lookup

1:47

film of the full lifecycle: list, raise, prove, invest, close, dividend

REAL

KYC with Didit: ID, liveness and face match, first check passed 25 Oct

REAL

Groth16 proofs generated in the browser and verified on-chain

REAL

External wallets (xBull, Freighter, Lobstr), SEP-10 and SEP-24

REAL

OFAC wallet screening, audit log, order-book trades

Established manufacturers, raising against real profit.

ILLUSTRATIVE · FROM PUBLIC FILINGS

An automotive-parts maker, 1987, 50–99 staff

Revenue 2025	€41.2M
Net profit 2025	€4.6M
Commits 20% of profit	€0.91M / yr to holders
At a 12% target yield	**€7.6M raise**

Sorea, Sainte-Eulalie-en-Royans · Registre national des entreprises

TARGET

Profitable industrial SMEs: auto parts, precision machining, components. Europe first, where the registers already plug in.

REVENUE

A flat listing fee per raise, never a percentage. Next: compliance tooling for transfer agents and portals.

INVESTORS

Non-US investors under Reg S, accredited US investors under 506(c), retail later through a Reg CF partner portal.

The code is ready. Next: audit, counsel, pilot.

NOW · DONE

Testnet

Full lifecycle live. Network switch and Circle mainnet USDC issuer already configured.

PHASE 1

Security

Audit of contracts and circuit. Multi-party trusted setup (phase 1 has 80 contributors). Deploy behind council and timelock.

PHASE 2

Legal & rails

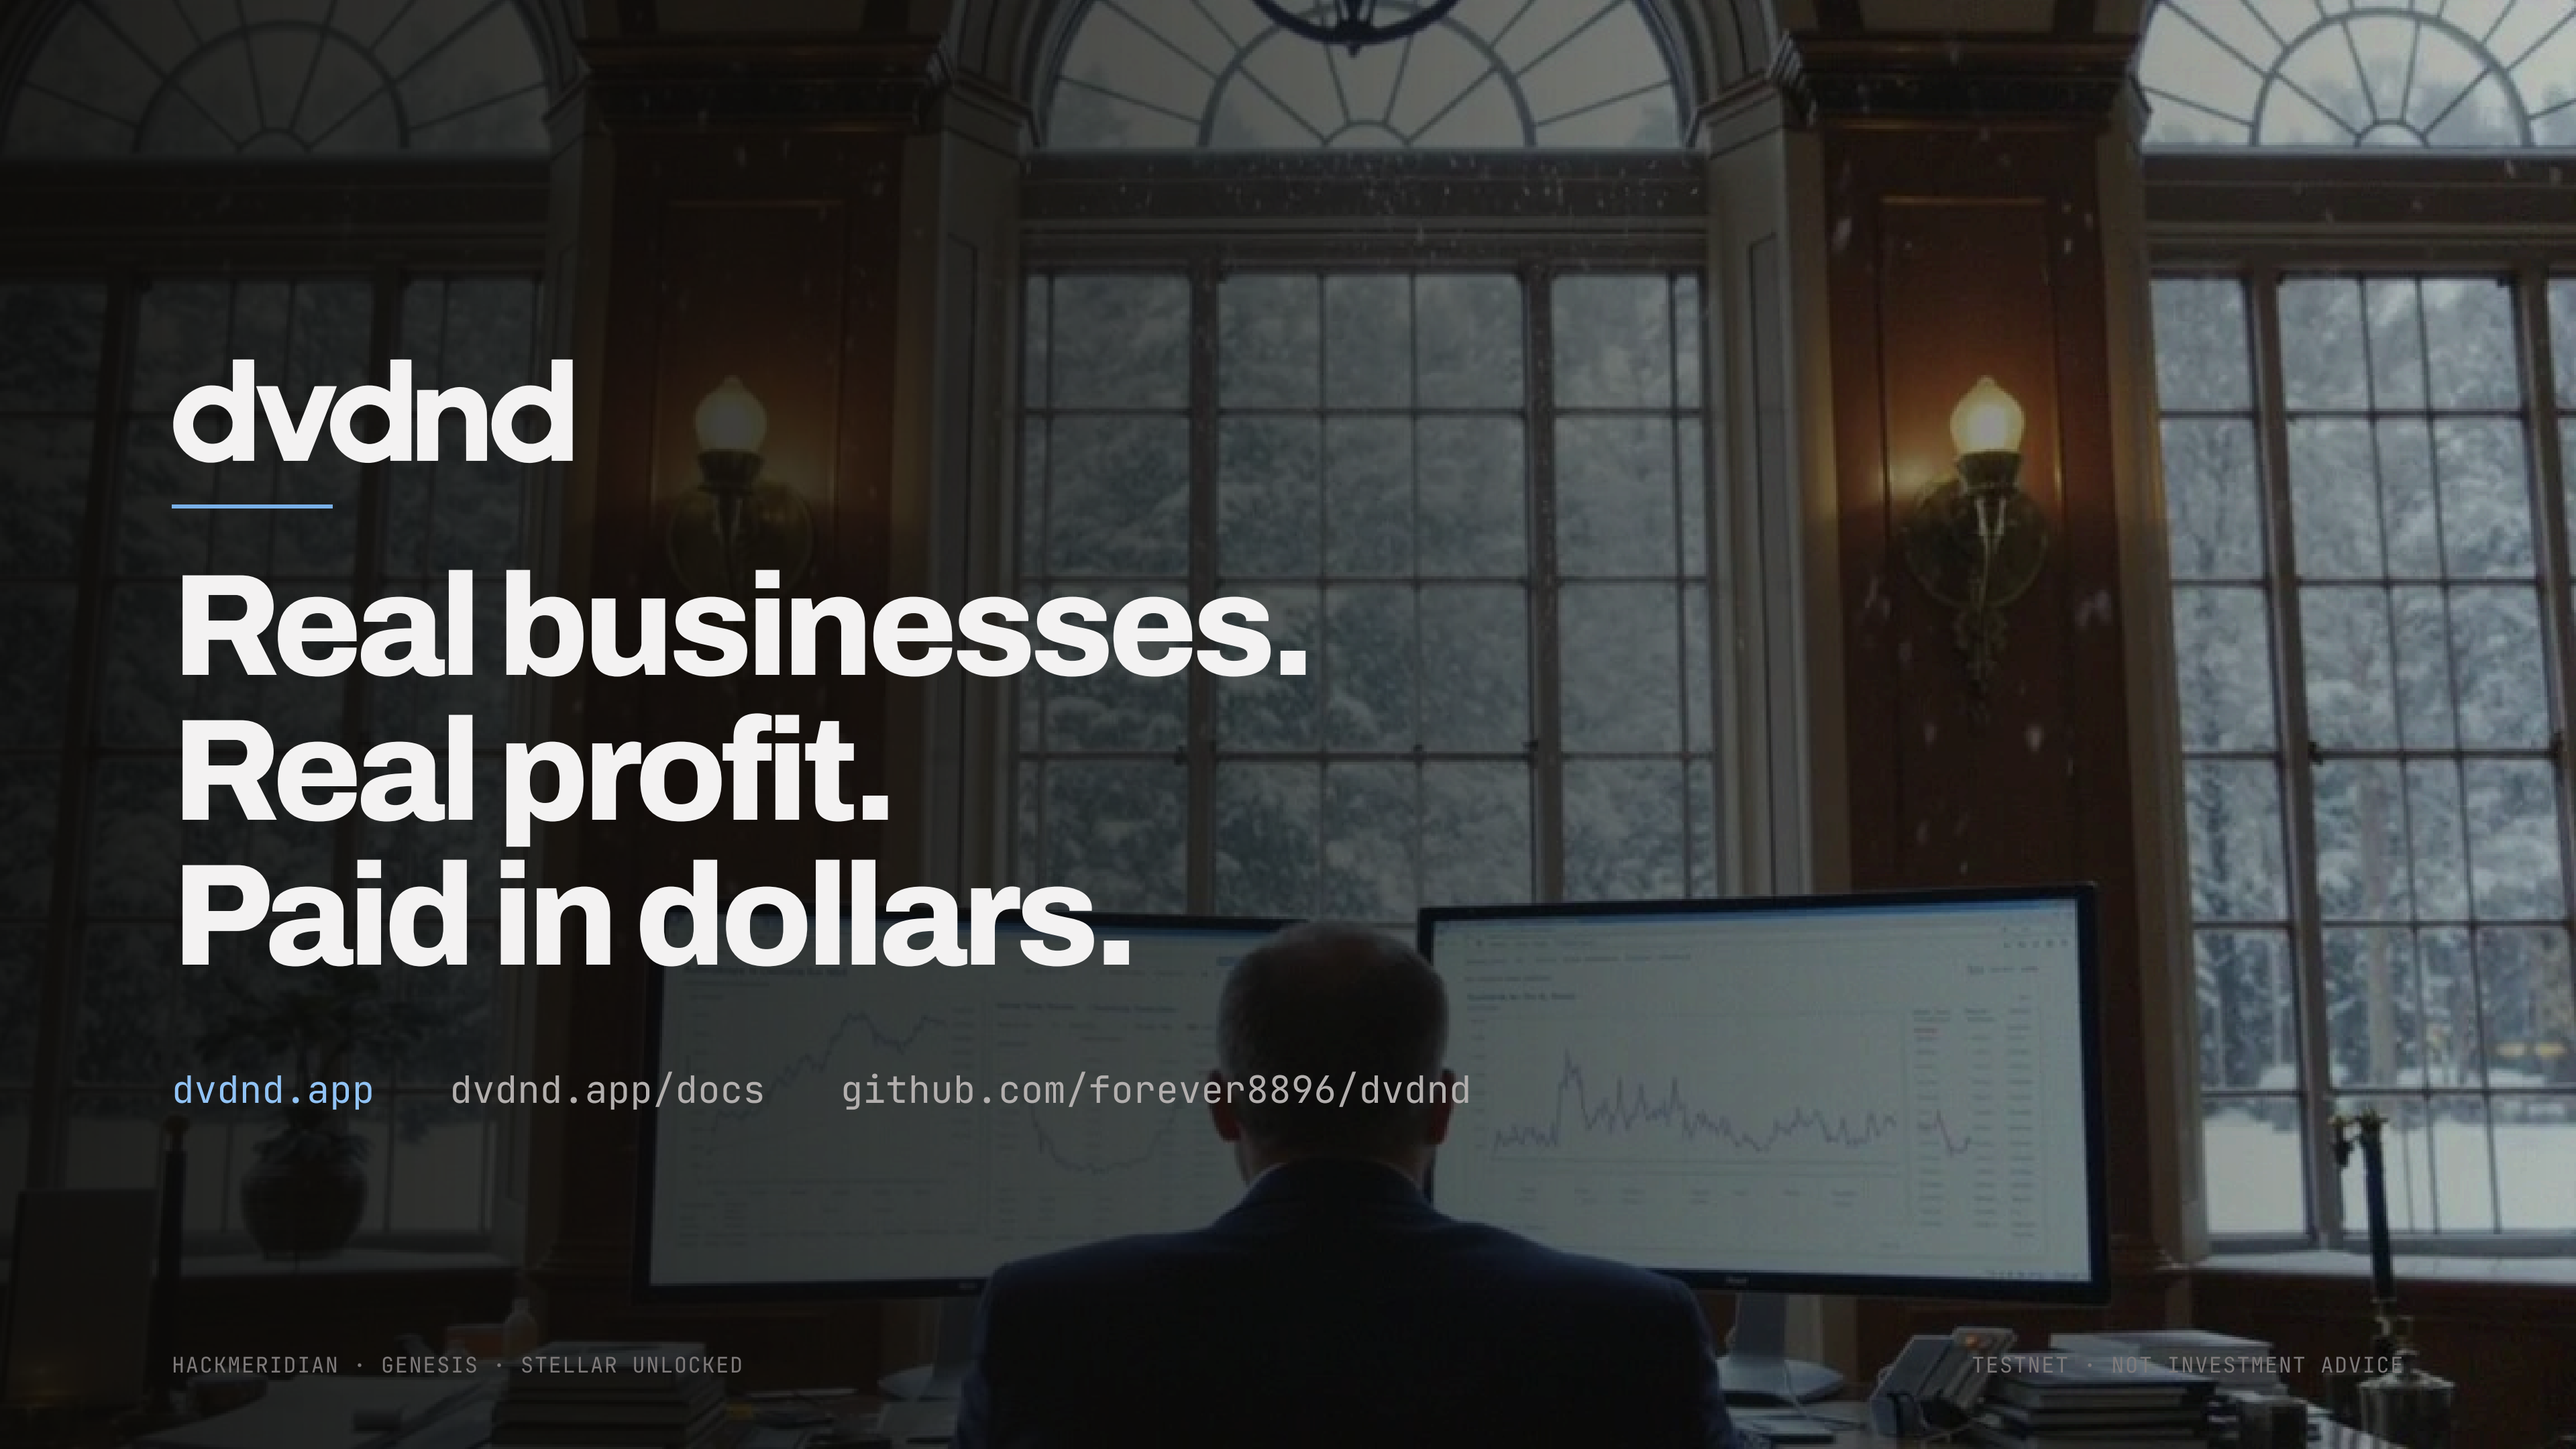

Counsel on §4(b) and code-held escrow. SPV or profit-participation wrapper. Accreditation service, Didit AML, Circle Mint, MoneyGram.

PHASE 3

Pilot, then scale

One to three manufacturers under 506(c) + Reg S with Form D filings and a transfer agent. Then Reg CF via a partner portal.

14 of 48 plan items remain, and 8 of them need a vendor or a lawyer rather than code.

dvdnd

Real businesses.
Real profit.
Paid in dollars.
